PRACTICAL RECORD

2026

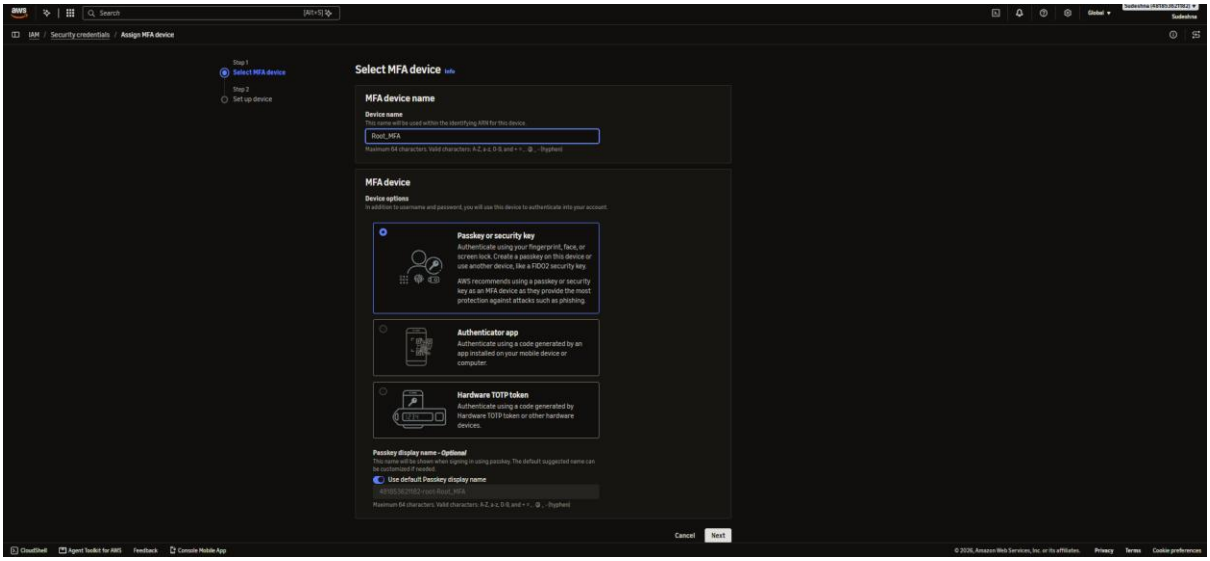

Experiment - 2

Step 1 – Select MFA Authentication Method

Description: This screen displays the available MFA authentication methods for securing an AWS account**.**

Steps:

1. Log in to the AWS Management Console.
2. Open Account Security settings.
3. Navigate to Multi-Factor Authentication (MFA).
4. Click Register MFA Device.
5. Select the required authentication method.

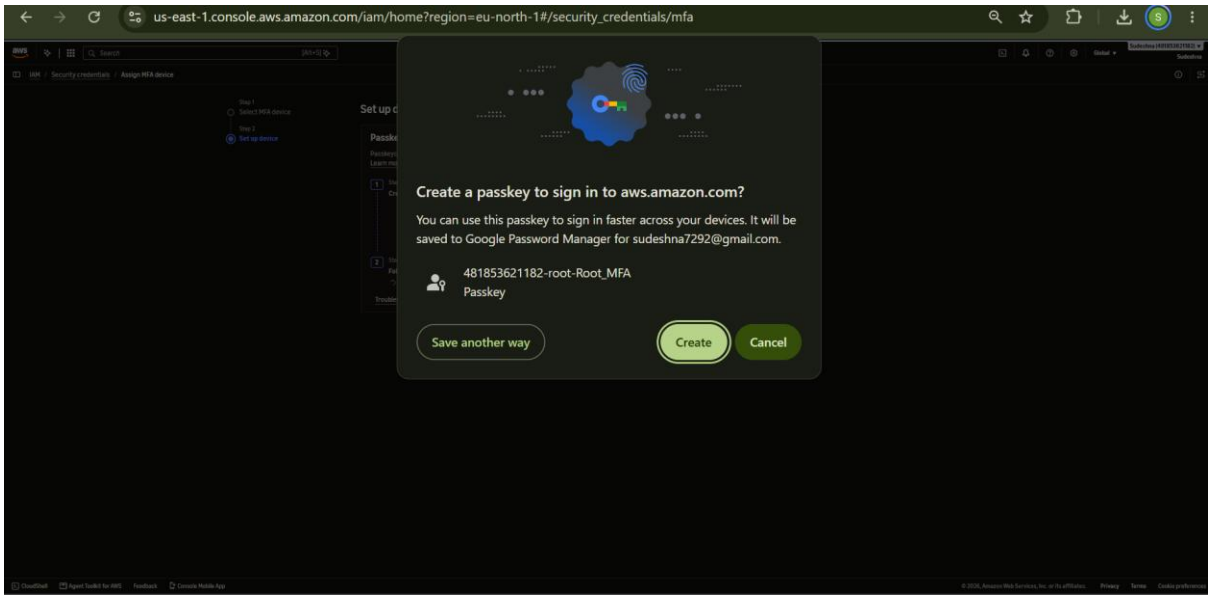

Step 2 – Create a Security Key PIN

Description: A Google Password Manager popup appears to create a PIN for the security key.

Steps:

1. Select the passkey/security key option.
2. Enter a new PIN.
3. Confirm the PIN.
4. Click Continue**.**

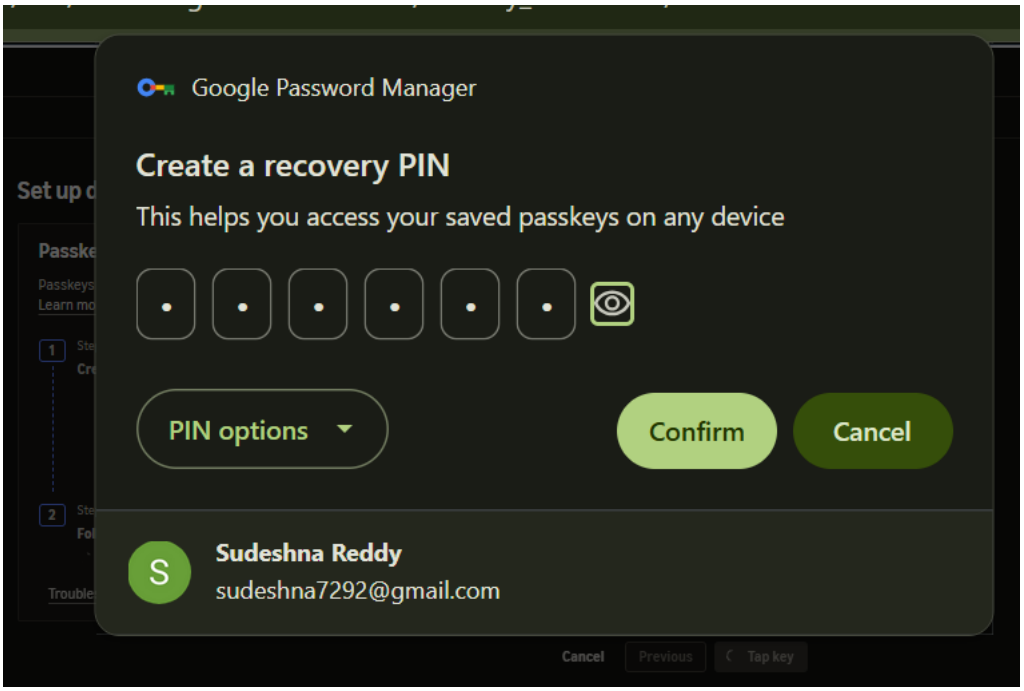

Step 3 – Confirm Security Key PIN

Description: The screen asks the user to confirm the security key PIN.

Steps:

1. Enter the previously created PIN.
2. Confirm the PIN.
3. Continue the security key registration process.

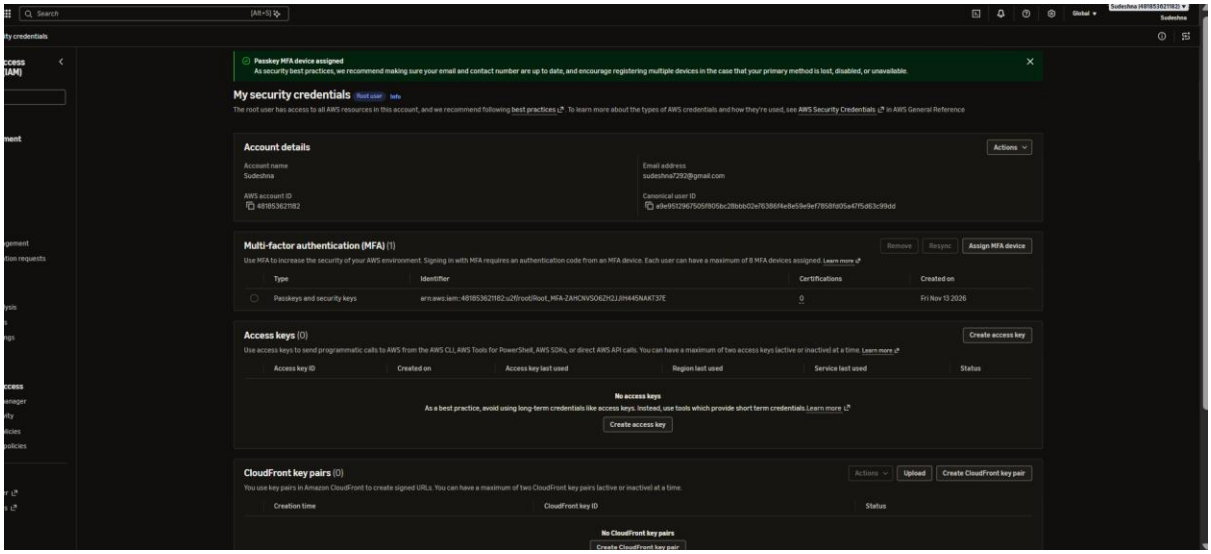

Step 4 – IAM User Details

Description: The IAM dashboard displays user account details and the MFA authentication device.

Steps:

1. Open the AWS IAM console.
2. Select Users.
3. Click the required IAM user.
4. Open the Security Credentials section.
5. Verify the MFA device details.

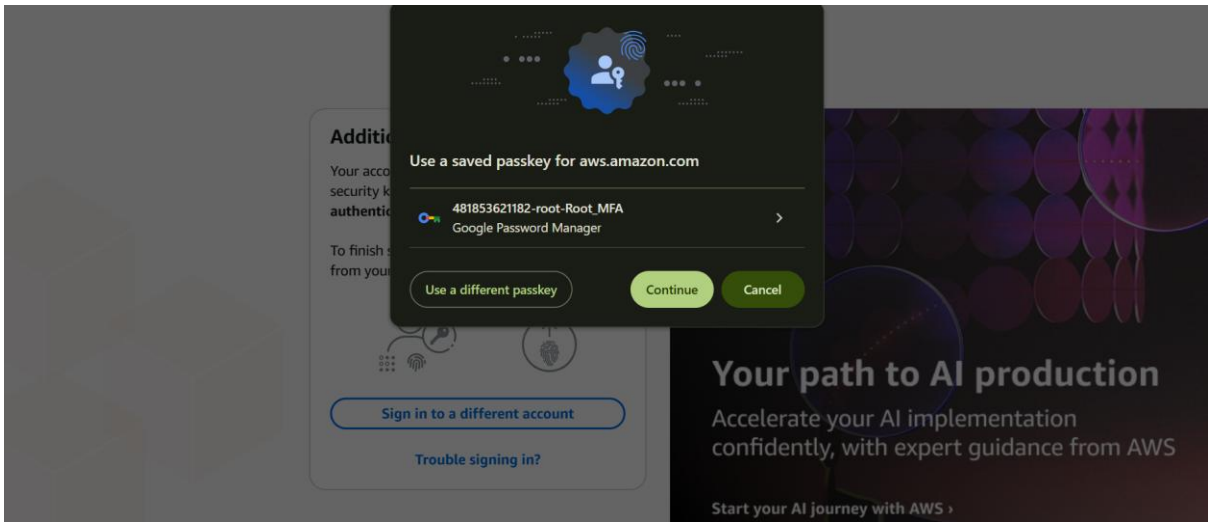

Step 5 – Additional Verification

Description: The AWS sign-in process requests authentication using the registered passkey.

Steps:

1. Open the AWS sign-in page.
2. Select the registered passkey.
3. Authenticate using the configured security key.
4. Complete the sign-in process.

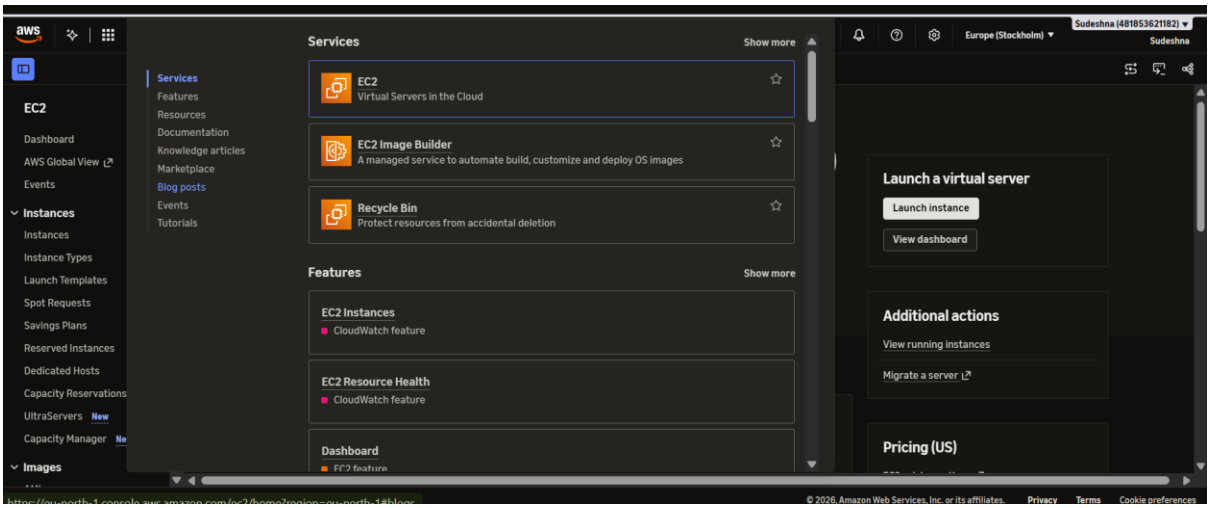

Step 6 – AWS Services Dashboard

Description: The AWS Management Console displays available cloud services.

Steps:

1. Log in to AWS.
2. Open the AWS Management Console.
3. Search for EC2 in the services search bar.
4. Select EC2 to continue.

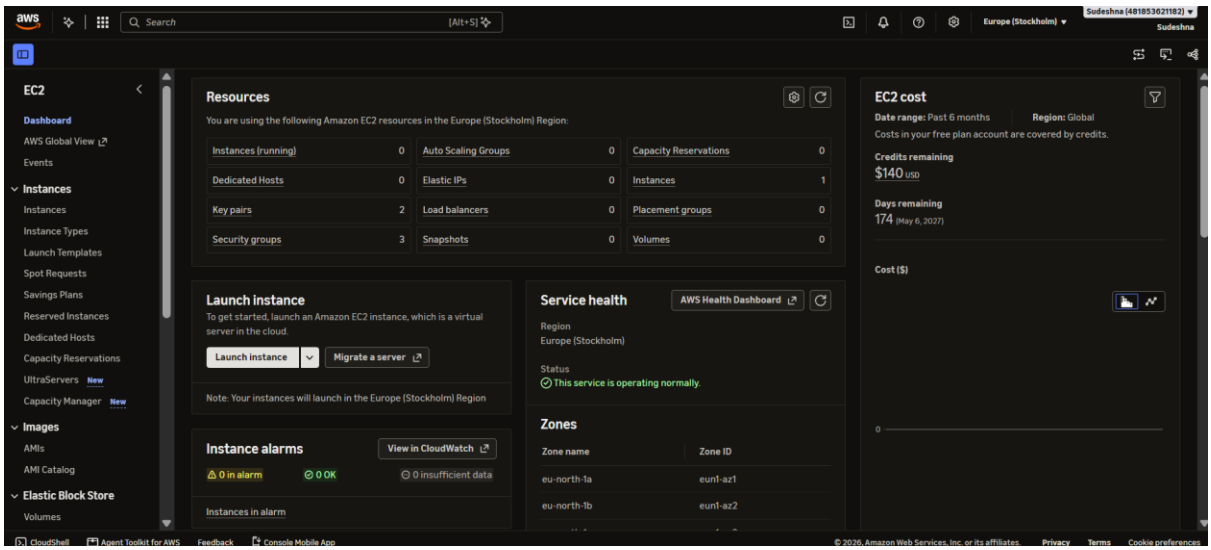

Step 7 – EC2 Dashboard

Description: The EC2 dashboard displays instance management options and AWS compute resources.

Steps:

1. Open the AWS Management Console.
2. Search for EC2.
3. Select EC2.
4. Open the EC2 dashboard.
5. Click Launch Instance.

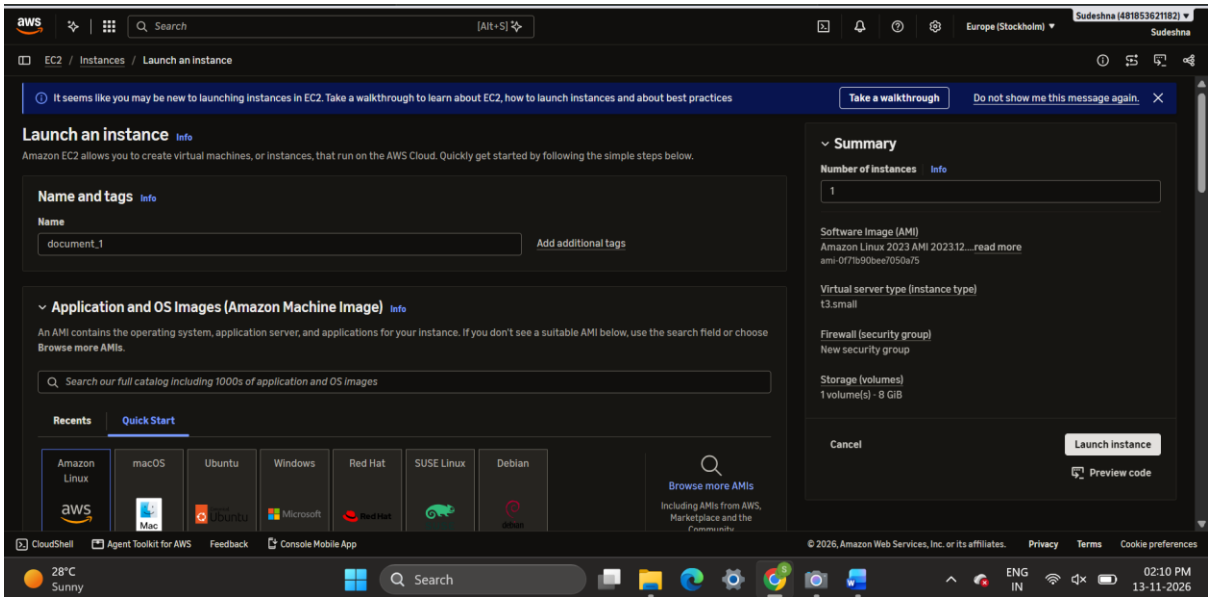

Step 8 – Configure EC2 Instance

Description: The Launch Instance page allows the user to enter the instance name and select an operating system image.

Steps:

1. Enter the instance name.
2. Select an Amazon Machine Image (AMI).
3. Choose the required operating system.
4. Verify the selected image.

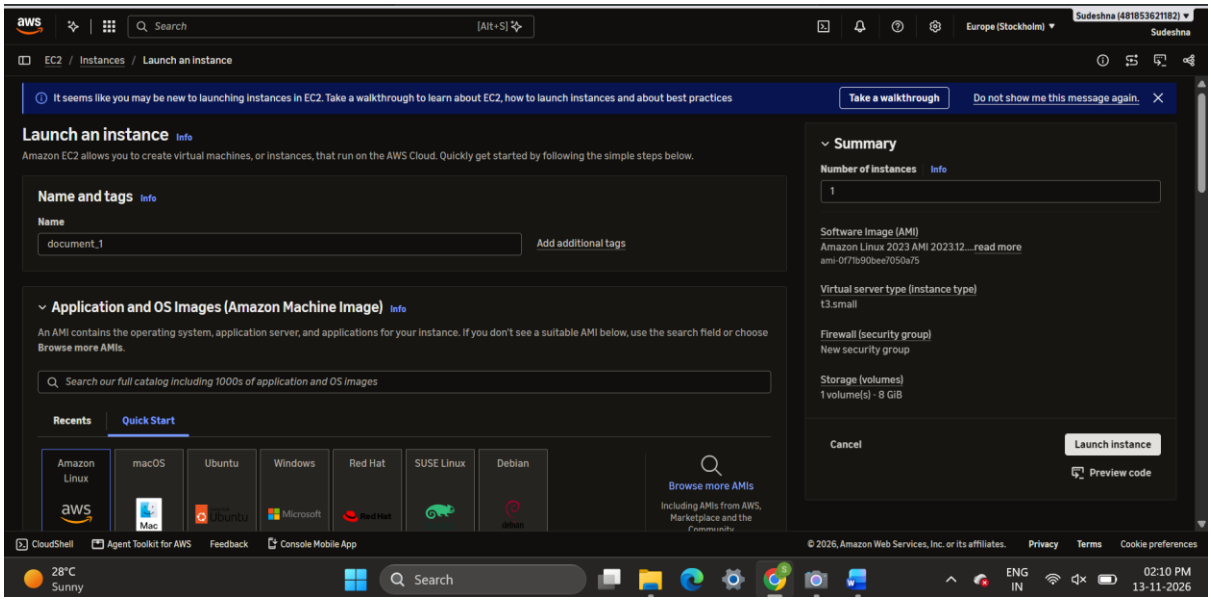

Step 9 – Select Instance Type

Description: This screen allows the user to select the EC2 instance type and configure the instance settings.

Steps:

1. Select the required instance type.
2. Choose the appropriate instance configuration.
3. Verify the selected instance details.
4. Continue to the key pair section.

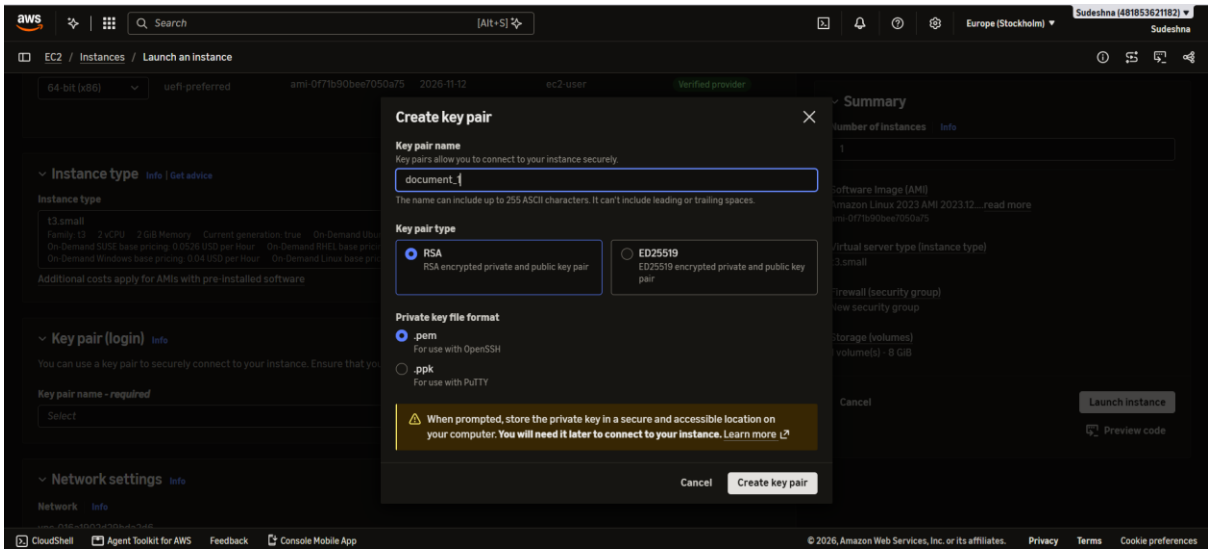

Step 10 – Create Key Pair

Description: The Create Key Pair dialog allows the user to generate a key pair for secure instance access.

Steps:

1. Click Create New Key Pair.
2. Enter a key pair name.
3. Select the key pair type.
4. Select the private key file format.
5. Click Create Key Pair.

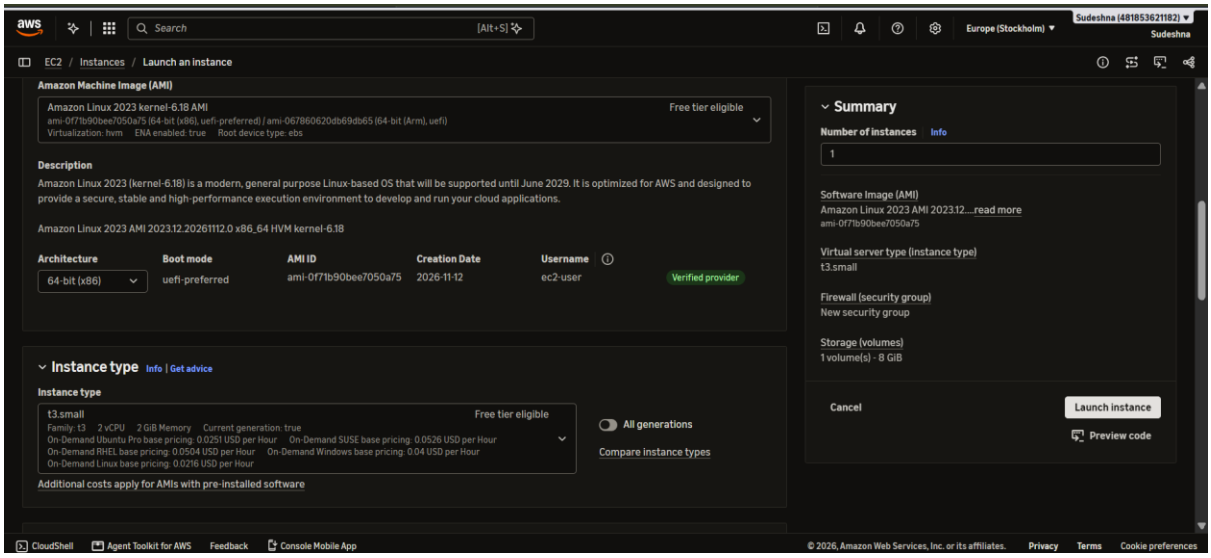

Step 11 – Network and Security Configuration

Description: The instance configuration page displays networking and security settings.

Steps:

1. Select the VPC.
2. Select the subnet.
3. Configure public IP settings if required.
4. Select or create a security group.
5. Verify the network configuration.

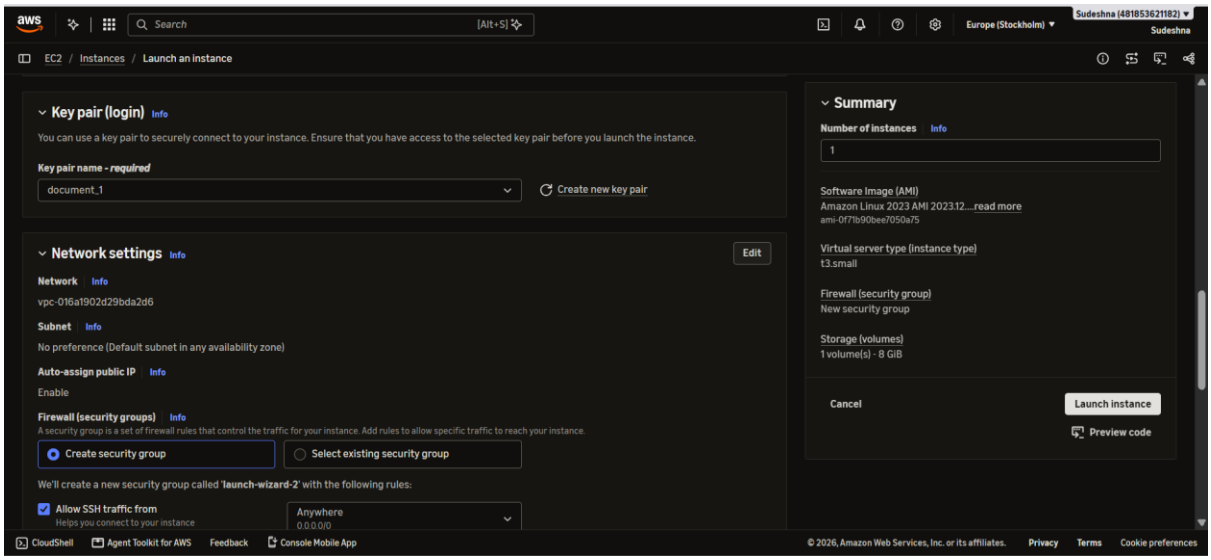

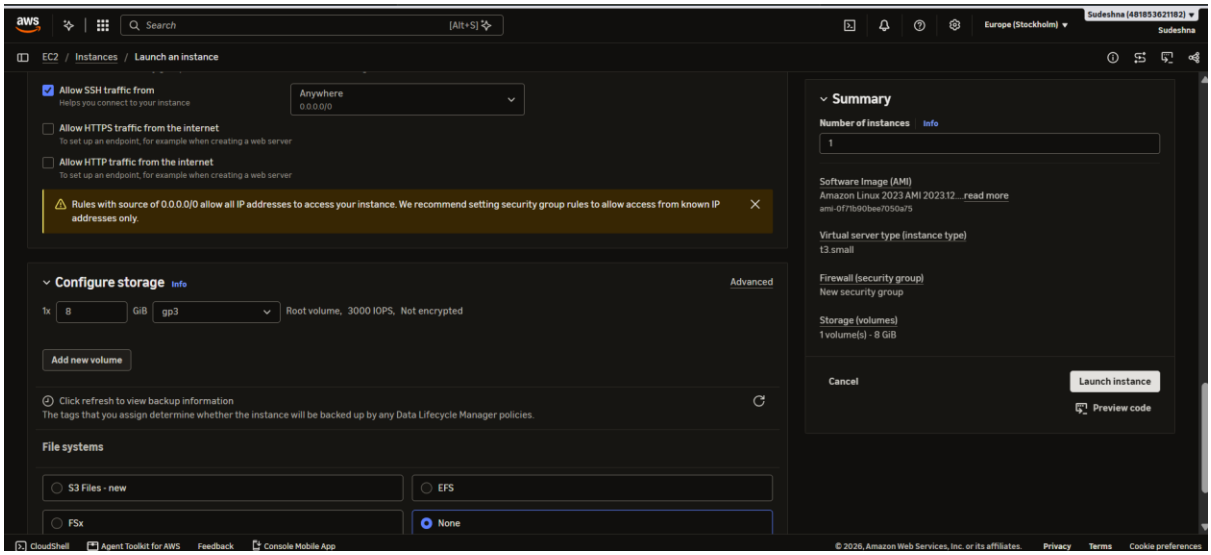

Step 12 – Configure Storage

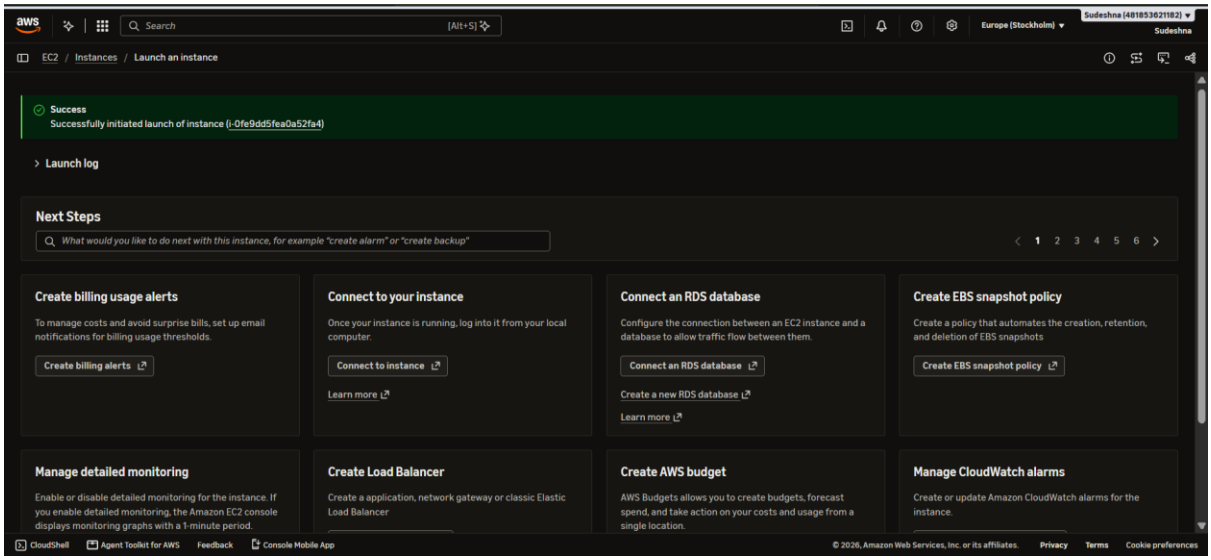

Description: The EC2 launch page displays storage configuration options.

Steps:

1. Review the root volume configuration.
2. Select the required storage size.
3. Verify the storage type.
4. Continue to the instance launch section.

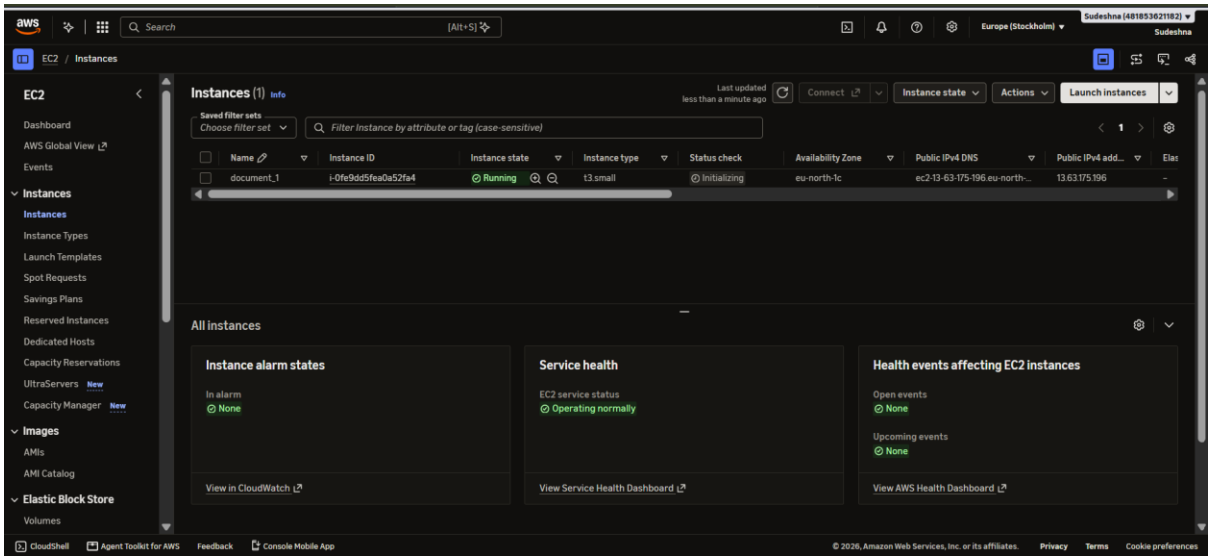

Step 13 – EC2 Instance Created

Description: The EC2 Instances page displays the newly created instance.

Steps:

1. Open EC2 Instances.
2. Locate the created instance.
3. Check the instance ID.
4. Verify the instance state.
5. Confirm successful creation.

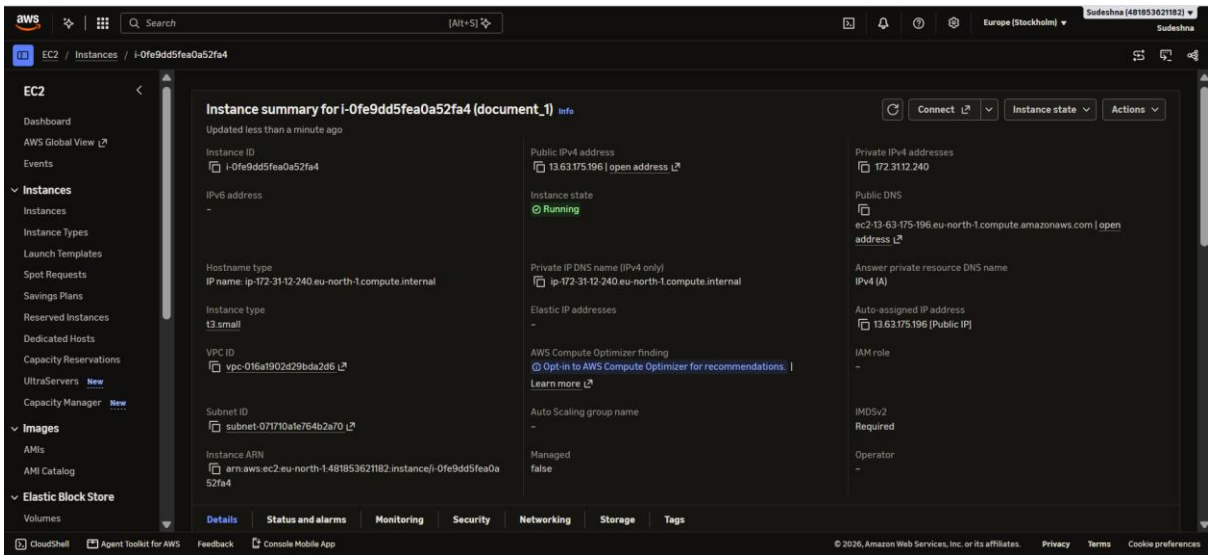

Step 14 – EC2 Instance Details

Description: The instance details page displays configuration information such as instance ID, instance type, networking, and status.

Steps:

1. Select the created instance.
2. Open the Details tab.
3. Review instance information.
4. Verify the instance status.

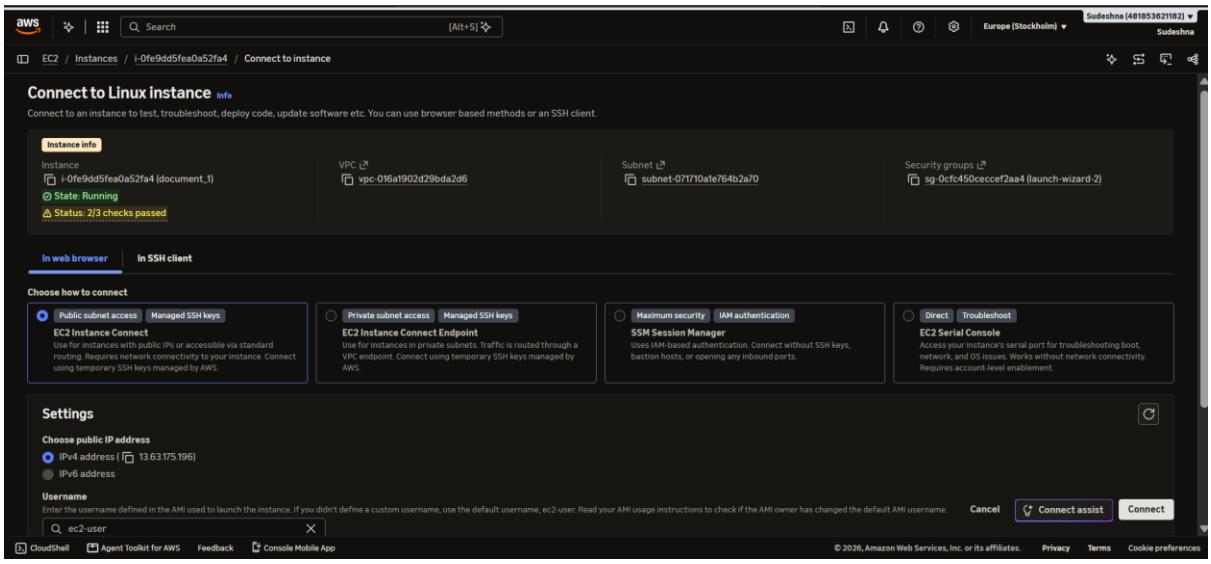

Step 15 – Connect to EC2 Using Terminal

Description: A terminal window is displayed for executing commands related to the EC2 instance.

Steps:

1. Open the terminal.
2. Navigate to the folder containing the private key.
3. Configure the required key permissions.
4. Use SSH to connect to the EC2 instance.
5. Verify the connection.

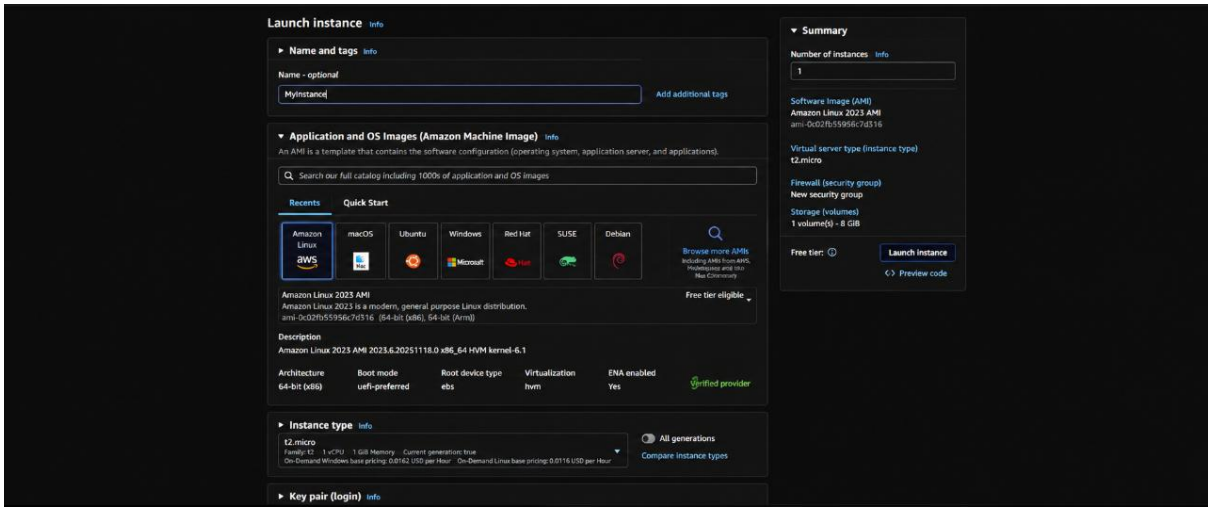

Step 16 – EC2 Instances List

Description: The EC2 console displays the list of created instances and their states.

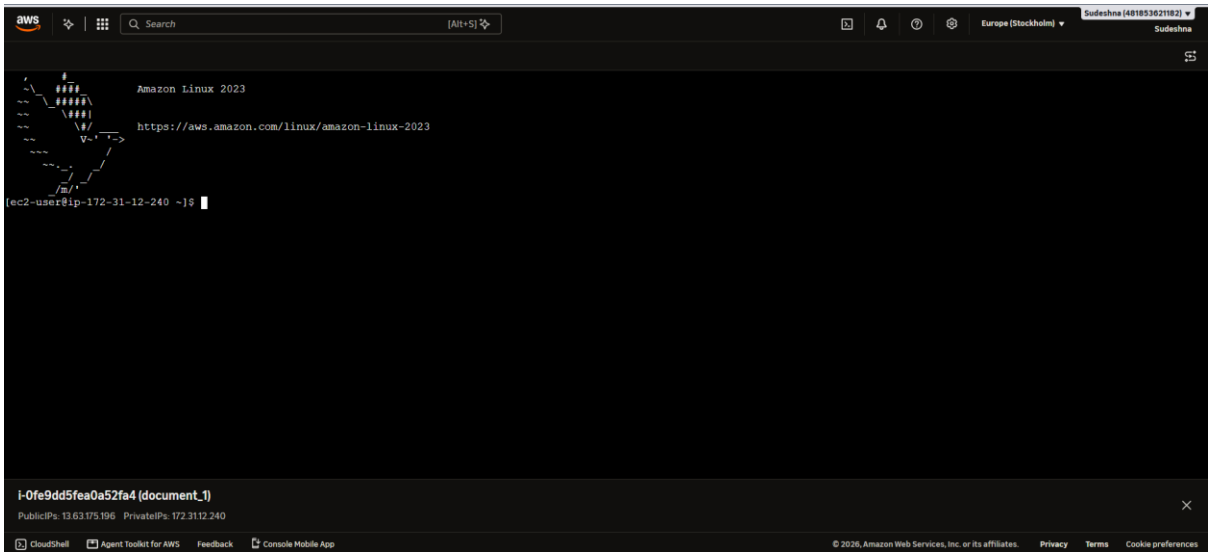

Steps:

1. Open EC2 Instances.
2. View the available instances.
3. Select the required instance.
4. Check its state and configuration.

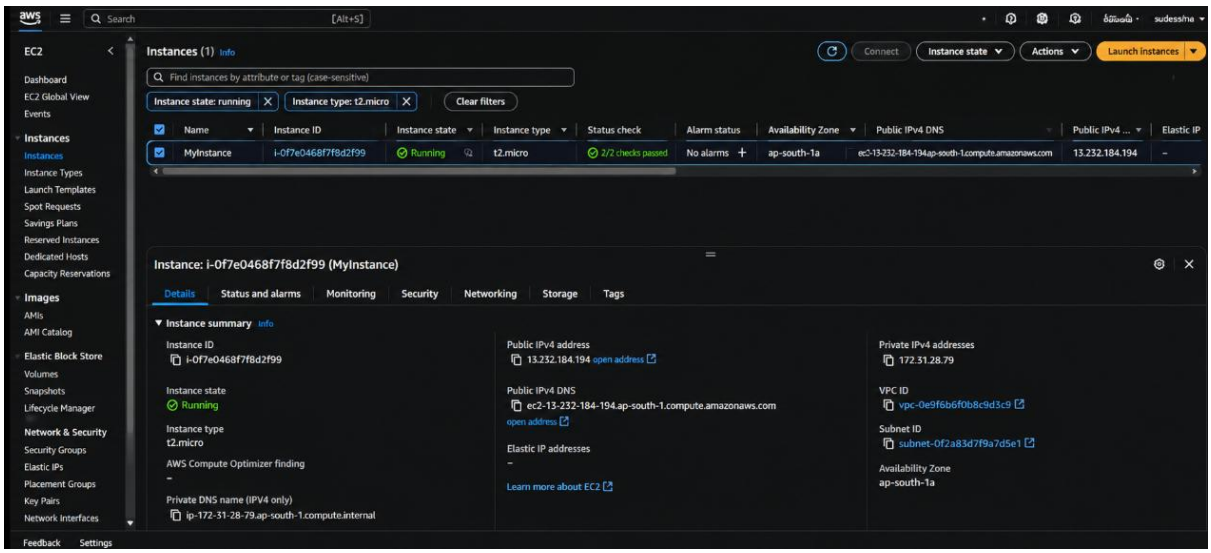

Again Creating an another name

Step 17 : Got an linux Output

Created instances

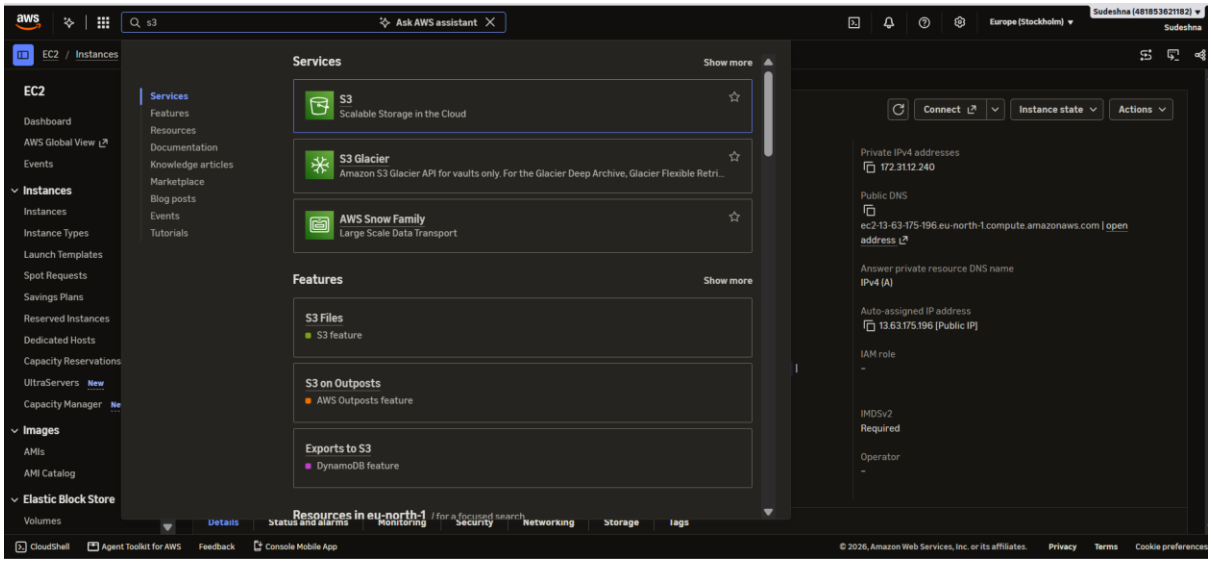

Create an S3 Bucket

Step 18– AWS Services Selection

Description: The AWS console displays the available cloud services, including Amazon S3.

Steps:

1. Open the AWS Management Console.
2. Search for S3.
3. Select Amazon S3.
4. Open the S3 dashboard.

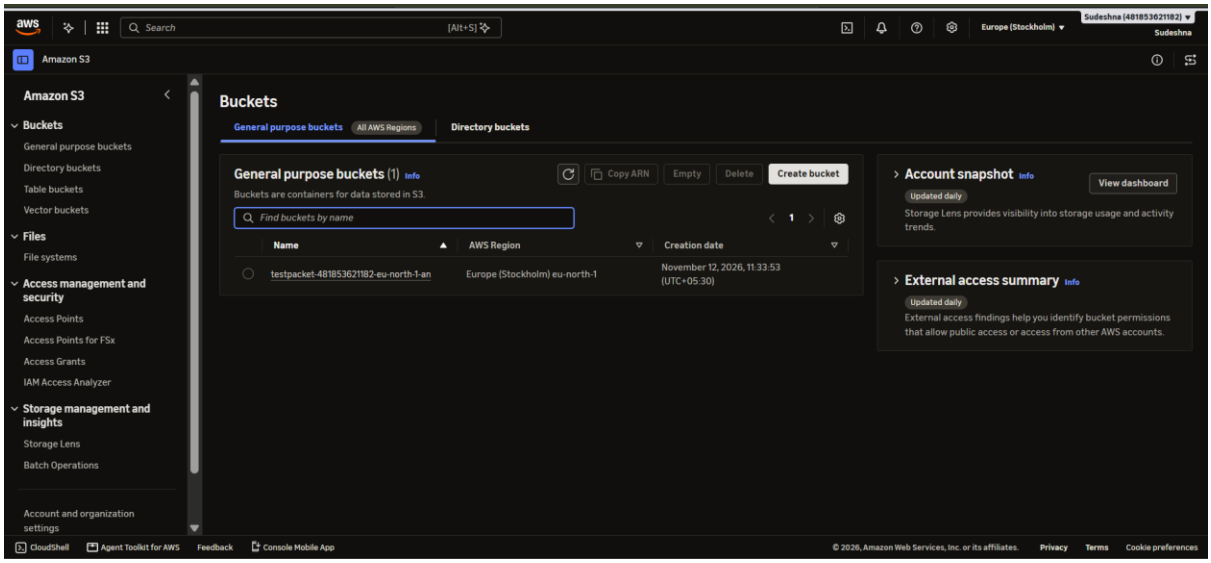

Step 19 – S3 Bucket Dashboard

Description: The S3 dashboard displays bucket management options.

Steps:

1. Open Amazon S3.
2. Select General Purpose Buckets.
3. View the existing buckets.
4. Click Create Bucket.

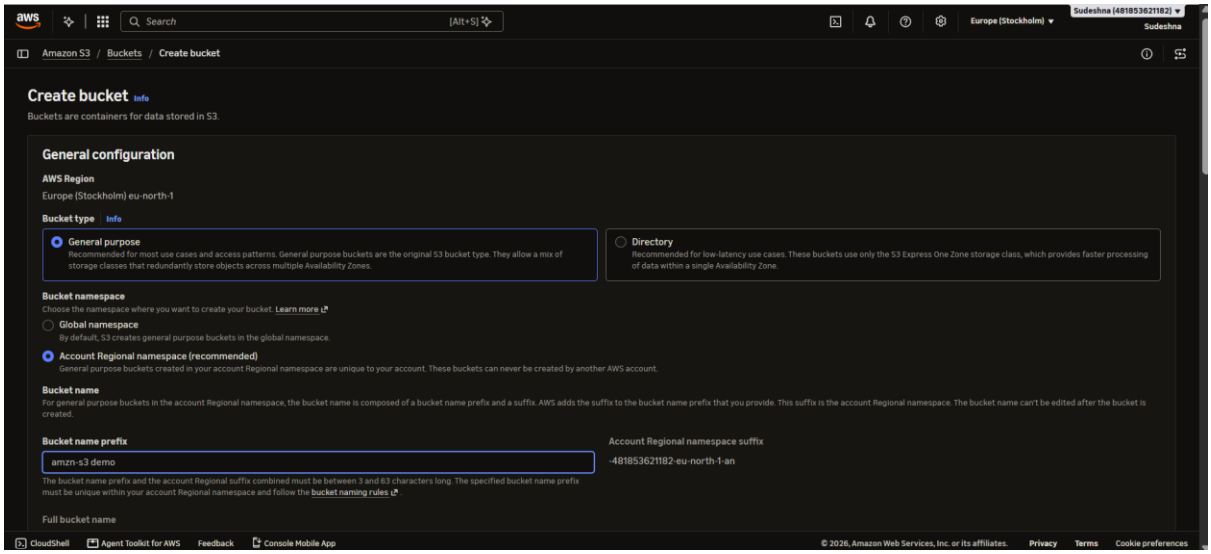

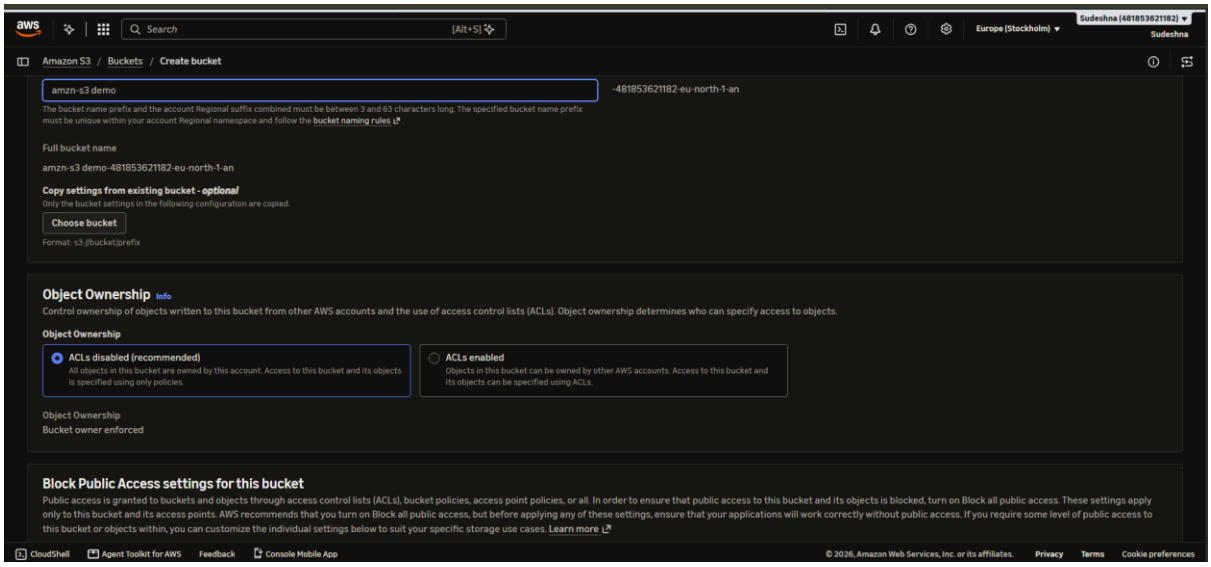

Step 20 – Create S3 Bucket

Description: The Create Bucket page allows the user to configure a new S3 bucket.

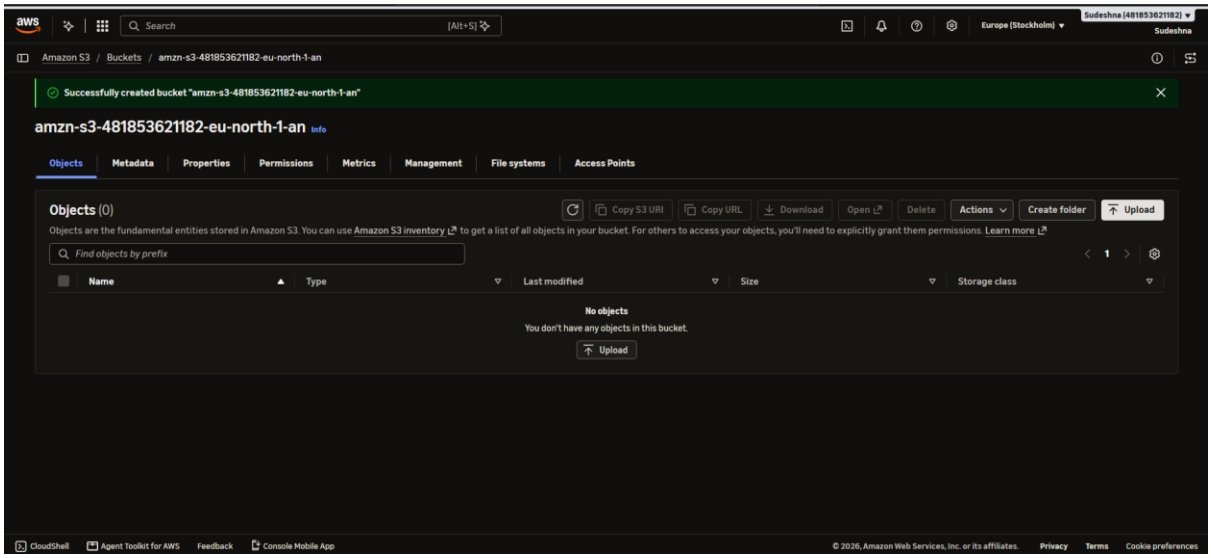

Steps:

1. Enter a unique bucket name.
2. Select the AWS Region.
3. Configure bucket ownership.
4. Review public access settings.
5. Configure bucket options.

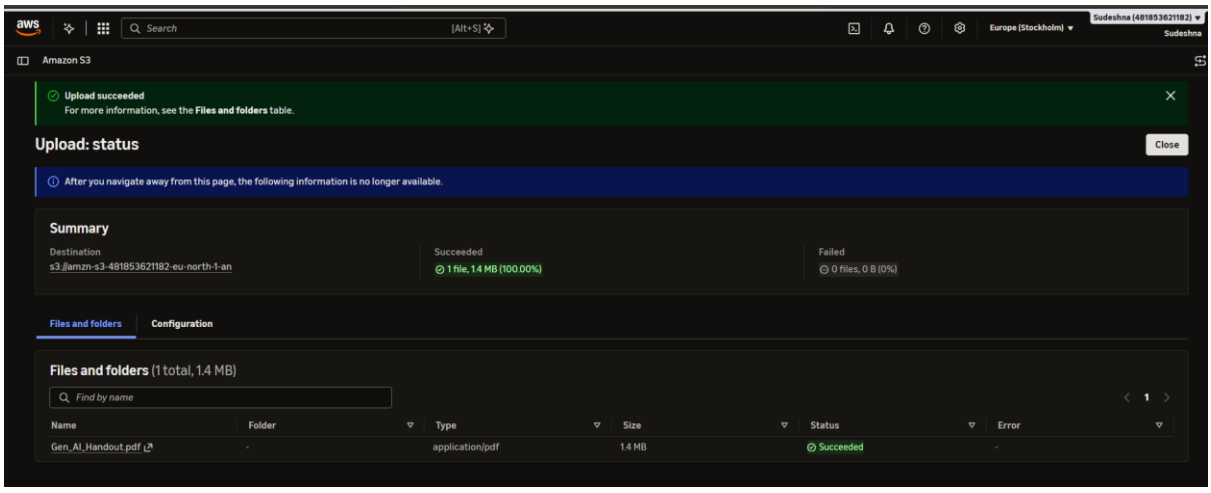

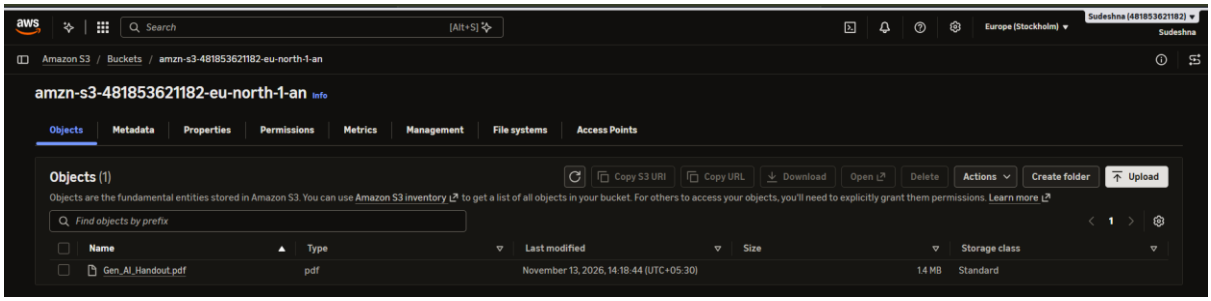

Step 21 – Created bucket

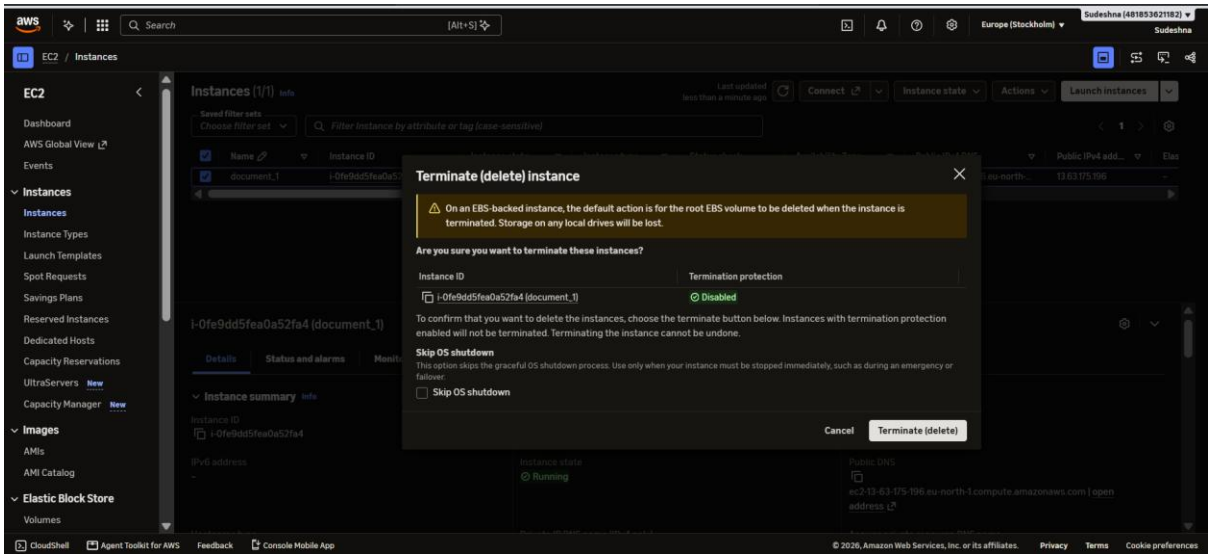

Step 22 – Uploading Files

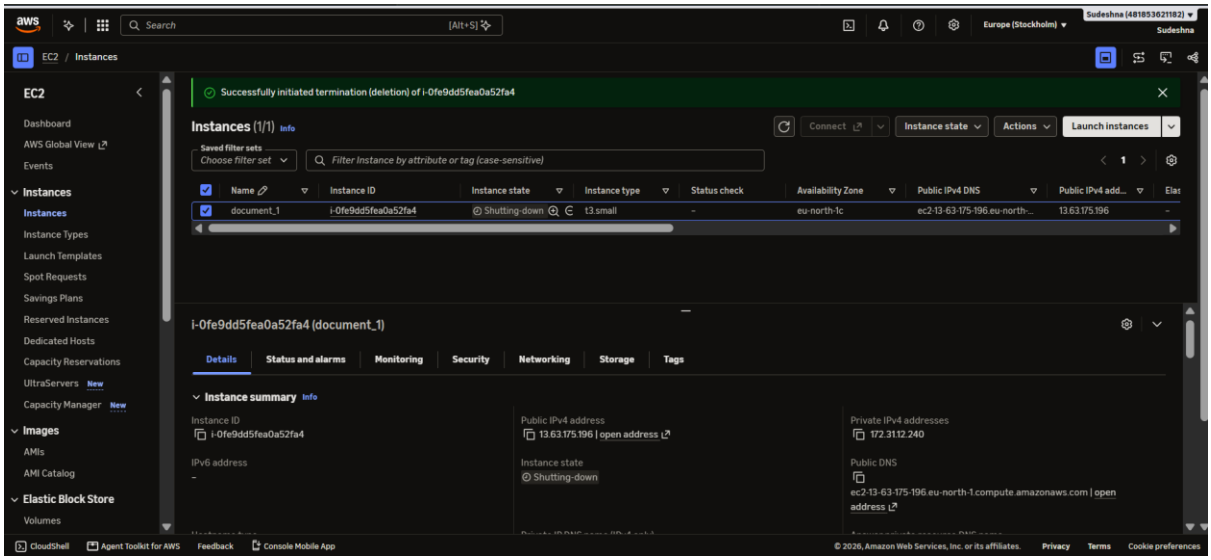

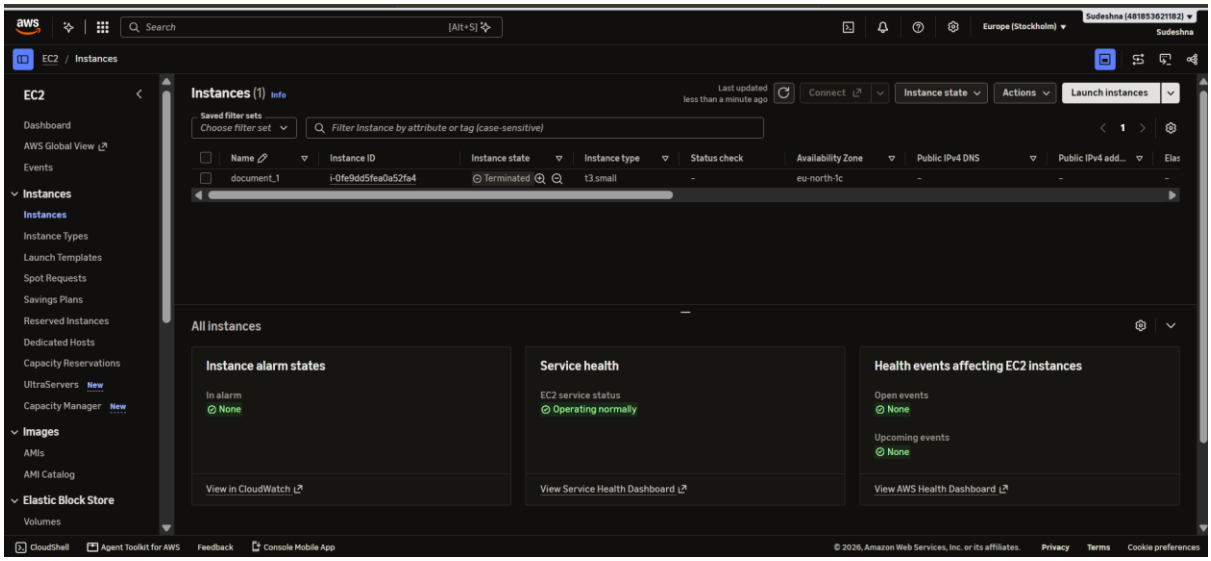

Step 23 - View in bucket which files are uploaded

Step 24 – Terminating the created Instances
